Admin guide

For: company admins of the AAPNA ATS. **Version:** October 2026.

As an admin you can do everything a recruiter can (see the Recruiter & HR guide), plus look after your company's accounts, decide who sees which screens, and set up how the recruitment process behaves: stages, reasons, emails and automation.

Your powers stop at your own company. Super Admins (see the Super Admin guide) look after companies and other admins.

Contents

1. Opening the admin portal

5. Pipeline configuration
6. Settings only admins can change
7. Email templates
8. MRF approvers and closing MRFs
9. Housekeeping checklist

---

1. Opening the admin portal

- Sign in at the **admin sign-in page** (`/admin/login`), or click the admin button in the top bar of the recruitment screens.

- The portal has its own top bar: **HR Admin**, your role badge, and the tabs. **Recruitment Portal** takes you back to the recruitment screens.
- Tabs: **User Management**, **Module Access**, **Referral Log** (and **Companies** / **Logs & errors** for Super Admins).

2. Users

User Management lists your company's accounts with counts: **Total users**, **Active** (can log in) and **Inactive** (access revoked). Search by name or email.

Add a user

1. Click **Add User**. Fill **First name**, **Last name**, **Email address**, an optional **Username** (blank = they sign in with their email), **Role** and **Password** (or **Generate** a secure one and **Copy** it).
2. Roles you can give: **Admin**, **Recruiter**, **Vendor**.
3. **Create User & Send Email**. The person is emailed their sign-in details at their own address.

Change a user: Edit → change name, email, username, role or **Account status**; type a **New password** only if you want to reset it (blank keeps the current one). The user is emailed when their credentials change.

Deactivate rather than delete. Set **Account status** to inactive: they can no longer sign in, and their history stays. Only a Super Admin can delete an account.

What you can't do (by design):

Rule	Why
You can't change your own role or status, or delete yourself	Nobody can lock themselves in or out by mistake
You can't edit, reset or deactivate another admin	Admins are peers; a Super Admin manages admins
You don't see Super Admin accounts or other companies' users	Your scope is your company

Everyone can change their own password (picture → **Change Password**, or **Forgot password?**). You only need to reset one for someone who is locked out.

3. Module access: who sees which screens

Module Access: pick a user on the left, then switch each screen on or off for them.

Module	Screen
New MRF	MRF
Search candidates	Search Candidate
HR manual upload	HR Manual Upload

Vendor upload	Vendor Upload
Candidate screening	Candidate Screening
Screening analytics	Recruitment Analytics
Recruitment pipeline	Candidate Pipeline
System config	Settings, Email Templates
HR admin	The admin portal (normally off for recruiters)

- **New recruiters** start with every recruitment screen on and the admin portal off. **New vendors** start with only Vendor Upload and their dashboard.
- Admins and Super Admins always see everything; switches don't apply to them.
- Switches save as you click them. The person is **signed out** so the change applies straight away; tell them they will need to sign in again.

4. Referral log

Every time a candidate is marked as an employee referral, changed, or has the referral removed, it is recorded with who, when and the referrer's name.

- **Referral Log** tab: filter by action, candidate, referrer and date. **Removals** are counted separately with a one-click filter, because a removal changes who gets hired. **Export** downloads the list.
- **Only admins can remove a referral**, and must type a reason: Search Candidate → candidate → Edit → Referral → **Remove referral**.

5. Pipeline configuration

Settings → Pipeline Configuration (admins only) shapes the candidate pipeline without a developer. Four tabs:

Tab	What you can do
Stages & Outcomes	Add a stage, rename it, set its **type** (Manual, Zeko, Assessment, Interview with scorecards, System) and order, mark it **Optional**, switch it **Active / Inactive**. For each stage, edit the outcomes (Approve / Hold / Reject…), which ones **advance** the candidate and which are **final**
Reject / Hold Reasons	The reasons recruiters choose from. Each applies to **all stages** or specific ones; switch off old reasons instead of deleting them, so past decisions keep their reason
Outcome Emails	For each stage and outcome, whether an email goes to the candidate and which template. "Nothing sends" means no email for that outcome
Email Routing	Who receives each internal email flow (**Goes to**, **Cc**), and whether it reaches the real inbox or the test inbox on staging

Be careful with:

- **Deactivating a stage that has candidates in it.** Move them first.

- **Optional stages** can be skipped by recruiters; the CEO round is optional since October 2026.
- **Outcome emails** go to real candidates in production. Check the template (section 7) before switching one on.

6. Settings only admins can change

Most of Settings is open to recruiters (see the recruiter guide, §11). Only admins can:

- **Company profile**: the "About AAPNA" text added to shortlist emails with the JD.
- **Assessment Automation → Auto-advance / auto-reject on score**: when on, importing Evalground results approves or rejects the round automatically at the pass mark.
- **Pipeline Configuration** (section 5).

Settings affect everyone, immediately. Each section explains what it will do before you save.

7. Email templates

- **Email Templates** lists every email the ATS sends. Recruiters can edit them; **only admins can create a new template**.
- Keep the placeholders in braces (`{candidate_name}`, `{{position}}`, `{{stage_label}}`…) exactly as written; they are filled in when the email is sent.
- Check **Live Preview** before saving. A wrong template goes to every candidate at that stage.
- To link a new template to an outcome, use **Pipeline Configuration → Outcome Emails**.

8. MRF approvers and closing MRFs

- **Approvers:** each MRF goes to the approvers on the approval roster; one approval is enough. Each approver gets a **personal link** that records who decided, when, from where and their comment. To change the roster, ask the ATS team (it is stored as a setting).
- **Re-send approval links** (MRF → details → approval trail) when an approver lost the email; the old links stop working.
- **Approval report:** MRF → **Approval audit** (admins only) downloads every approval event of the last 90 days: who, when, IP and device.
- **Closing:** an MRF closes by itself when all its openings are filled by accepted offers. Close one by hand with **Close requisition…** and a reason (filled elsewhere, cancelled, on hold). Stale test MRFs should be closed so the open-positions list stays accurate.
- Approvers' IP address and device are masked automatically 12 months after their decision; who decided and when are kept for good.

9. Housekeeping checklist

Monthly, or after a change of staff:

- ☐ People who left: **deactivate** their account.
- ☐ New joiners in HR or other teams who hire: create accounts with the right **modules** so their hiring is in the ATS.
- ☐ Vendors you no longer use: deactivate them.
- ☐ Old or test MRFs still showing as open: close them with a reason.
- ☐ Candidates tagged to the wrong MRF: close that journey (pipeline → Close this candidate's record).
- ☐ Reject / Hold reasons: switch off any no longer used.
- ☐ Email Routing: the internal recipients are still the right people.
